DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 3, 8 and 13, drawn to changing a variable gain amplifying means based on an auto exposure value, classified in class 348, subclass 353.
- II. Claims 4, 9 and 14 drawn to changing a variable gain amplifying means based on an auto focus value, classified in class 348, subclass 350.
- III. Claims 5, 10 and 15 drawn to setting an auto exposure value for an auto focus area independent from the auto exposure control operation, wherein the auto focus operation is executed after the auto exposure operation for the auto focus area is performed by the AE setting means for the AF area, classified in class 348, subclass 354.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, invention I has separate utility

such as in an electronic camera which does not include adjusting the variable gain amplifying means based on an auto focus value as claimed in invention II, nor does invention I include a function of calculating auto exposure independent of the auto exposure control operation as claimed in invention III. Invention II has separate utility such as in an electronic camera which does not include adjusting the variable gain amplifying means based on an auto exposure value as claimed in invention I, nor does invention I include a function of calculating auto exposure independent of the auto exposure control operation as claimed in invention III. See MPEP § 806.05(d).

The examiner has required restriction between subcombinations usable together. Where applicant elects a subcombination and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement may be traversed (37 CFR 1.143).
